
Financial Tear Sheet

Corporate Profile

NeoPhotonics is a leading designer and manufacturer of photonic integrated circuit, or PIC, based modules and subsystems for bandwidth-intensive, high-speed communications networks. NeoPhotonics' products simplify optical network implementation by delivering high levels of integration through PIC solutions, which combine multiple discrete elements, in some cases over one hundred, on a single chip. NeoPhotonics' PIC-based approach enables it to deliver the increased performance, reliability and power efficiency in modules and subsystems necessary for 100Gbps, while also reducing cost and physical size to allow complex ROADM modules. NeoPhotonics has developed PIC-based products that achieve the increased performance required to migrate networks from 10Gbps to 100Gbps, that provide network agility through cost effective ROADM modules and that enable network access in outside plant PON installations and wireless backhaul systems. NeoPhotonics' vertically integrated design and manufacturing process encompasses all steps from wafer design and fabrication to assembly and test, and allows for rapid iterations in the development cycle and shorter time-to-market for its products.
